## **Solar System Evolution: A New Perspective** By Stuart Ross Taylor

This completely rewritten new edition begins with a historical perspective of the place of the solar system in the universe. Evidence from meteorites is used to describe how the planets were formed and the giant planets are considered in the light of the discovery of new extrasolar giants. Other chapters discuss satellites, comets, centaurs, asteroids and why Pluto is not a planet. Explanations on why Earth and Venus turned out so differently, and how Mars and Mercury are the survivors of many similar bodies, are also discussed.

## **Editorial Review**

### **Review**

"Overall, a good way to learn about how the Earth, Sun, and planets were formed. Highly recommended."

Choice

I cannot fault Ross Taylor on his approach; it is a model of succinctness and the illustrations are well chosen and reproduced. He marshals the mass of chemical and physical evidence into a well-ordered structure and, although no scientist can be entirely unbiased, to my mind argues his case fairly and with considerable skill... Read this excellent, informative and extremely entertaining book." Geological Magazine

### **About the Author**

Ross Taylor took degrees in chemistry and geology. He is Emeritus Professor and Visiting Fellow at the Australian National University, Canberra, Australia.

## **Users Review**

### **From reader reviews:**

#### **Edwin Dulac:**
