Multidisciplinary Head and Neck Reconstruction: A Defect-Oriented Approach From LWW

Illustrated with over 3,400 drawings and full-color photographs, this volume presents a unique multidisciplinary approach to head and neck reconstruction, combining input from otolaryngologists, plastic surgeons, oral and maxillofacial surgeons, maxillofacial prosthodontists, oculoplastic surgeons, speech and swallowing therapists, and metabolic support and nutrition specialists. For each anatomic region of the head and neck, the book defines the various defects from the reconstructive surgeon's point of view and presents actual cases demonstrating how each defect was reconstructed. In-depth discussions by leaders in the field allow the reader to appreciate the basic principles as well as the nuances of restoring each defect to an optimal level using regional flaps, free flaps, and prosthetic rehabilitation. The detailed case presentations show flap design and inset to achieve the final result.

One of the key advances emphasized is the combination of implant technology and free tissue transfer to achieve the highest level of functional restoration. The reconstruction of patients following failure of radiation therapy is also extensively discussed.

Editorial Review

Review

The Journal of Laryngology and Otology, 10-NOV-09, Kim Ah-See, Consultant Head and Neck Surgeon, Aberdeen Royal Infirmary, Foresterhill, Aberdeen, UK -- "This new hardback colour textbook on Head and Neck reconstruction has been written by the well respected Mark Urken from New York. It is over 800 pages long and is crammed full of colour clinical photographs on high quality gloss paper... "It represents the fruits of his considerable clinical experience over the past 20 years or so. The chapters are largely based on site-specific reconstruction techniques. While the majority of defects result from neoplastic disease, there is a chapter at the end dedicated to trauma reconstruction and also a chapter on paediatric cases, both of which would also be of interest to our Maxillo-Facial colleagues. Three initial chapters deal with special topics related to the head and neck patient, including issues around nutrition, vascular access and complications of free tissue transfer. "The format of the chapters is based on a description of basic principles and considerations for reconstruction in particular areas, followed by detailed case studies including descriptions of their clinical course, illustrated with staged clinical photographs. There are some helpful classification systems, largely based on Urken's own experience and they therefore may not be familiar to most readers. "While this textbook eloquently describes the management of dozens of challenging cases, it is not meant as a 'How I do it' type text. If you don't know how to do a free radial forearm flap, then you still won't after reading this book. You will however gain an understanding of the different scenarios in which it can be used...In essence, this is a hugely detailed and colourful descriptive case series."-The Journal of Laryngology and Otology

Users Review

From reader reviews:

Kevin House:

Do you one of the book lovers? If yes, do you ever feel doubt if you find yourself in the book store? Aim to pick one book that you find out the inside because don't determine book by its cover may doesn't work this is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside search like. Maybe your answer could be Multidisciplinary Head and Neck Reconstruction: A Defect-Oriented Approach why because the wonderful cover that make you consider in regards to the content will not disappoint an individual. The inside or content is fantastic as the outside or maybe cover. Your reading 6th sense will directly show you to pick up this book.

Bill Kelly:

Are you kind of busy person, only have 10 or 15 minute in your moment to upgrading your mind ability or thinking skill possibly analytical thinking? Then you are receiving problem with the book in comparison with can satisfy your short space of time to read it because this time you only find book that need more time to be learned. Multidisciplinary Head and Neck Reconstruction: A Defect-Oriented Approach can be your answer given it can be read by you actually who have those short free time problems.

Charles Owens:

The book untitled Multidisciplinary Head and Neck Reconstruction: A Defect-Oriented Approach contain a lot of information on it. The writer explains the woman idea with easy technique. The language is very simple to implement all the people, so do definitely not worry, you can easy to read the item. The book was published by famous author.
