## **Representations of Groups: A Computational Approach (Cambridge Studies in Advanced Mathematics)** By Klaus Lux, Herbert Pahlings

The representation theory of finite groups has seen rapid growth in recent years with the development of efficient algorithms and computer algebra systems. This is the first book to provide an introduction to the ordinary and modular representation theory of finite groups with special emphasis on the computational aspects of the subject. Evolving from courses taught at Aachen University, this well-paced text is ideal for graduate-level study. The authors provide over 200 exercises, both theoretical and computational, and include worked examples using the computer algebra system GAP. These make the abstract theory tangible and engage students in real hands-on work. GAP is freely available from [www.gap-system.org](http://www.gap-system.org) and readers can download source code and solutions to selected exercises from the book's web page.

### **Editorial Review**

#### **Review**

"Representations of Groups: A Computational Approach, by Lux and Pahlings, is a well-constructed, dense, and, its introductory nature notwithstanding, pretty far-reaching text. Happily, it is also quite accessible....As it should be given what the authors have in mind, Representations of Groups: A Computational Approach is laden with examples and exercises, many of them supplied with hints. The book is well-written and anything but chatty and is based on the authors' courses so that much of the material in the book has been field tested." Michael Berg, MAA Reviews

"I enjoyed reading this book, and recommend it as a good modern second course in representation theory. The choice of topics and their arrangement are interesting, sometimes even surprising, but clearly well thought out."

Robert A. Wilson, Bulletin of the London Mathematical Society

"... this is really a wonderful, nice, and significant book, which is so well written, and it is recommended to a wide range of mathematicians, including not only graduate students but also many mathematicians of greater experience."

Shigeo Koshittani, Mathematical Reviews

#### **About the Author**

Klaus Lux is Associate Professor in the Department of Mathematics at the University of Arizona, Tucson.

Herbert Pahlings is Professor Emeritus at RWTH Aachen University in Germany.

### **Users Review**

#### **From reader reviews:**

##### **Mary Bingham:**

Book is usually written, printed, or descriptive for everything. You can learn everything you want by a reserve. Book has a different type. As it is known to us that book is important issue to bring us around the world. Beside that you can your reading talent was fluently. A e-book Representations of Groups: A Computational Approach (Cambridge Studies in Advanced Mathematics) will make you to end up being smarter. You can feel considerably more confidence if you can know about every thing. But some of you think this open or reading a book make you bored. It isn't make you fun. Why they can be thought like that? Have you trying to find best book or acceptable book with you?

##### **Michelle Dewees:**

What do you think about book? It is just for students because they're still students or it for all people in the world, what the best subject for that? Only you can be answered for that question above. Every person has distinct personality and hobby for each and every other. Don't to be pressured someone or something that they don't would like do that. You must know how great and also important the book Representations of

Groups: A Computational Approach (Cambridge Studies in Advanced Mathematics). All type of book can you see on many resources. You can look for the internet resources or other social media.

### **Carrie Correll:**

Reading a reserve can be one of a lot of action that everyone in the world loves. Do you like reading book so. There are a lot of reasons why people enjoyed. First reading a guide will give you a lot of new info. When you read a book you will get new information because book is one of several ways to share the information or their idea. Second, reading through a book will make you more imaginative. When you reading a book especially fiction book the author will bring you to imagine the story how the characters do it anything. Third, it is possible to share your knowledge to other people. When you read this Representations of Groups: A Computational Approach (Cambridge Studies in Advanced Mathematics), it is possible to tells your family, friends along with soon about yours publication. Your knowledge can inspire different ones, make them reading a publication.

### **Alyson Ward:**

The book untitled Representations of Groups: A Computational Approach (Cambridge Studies in Advanced Mathematics) contain a lot of information on this. The writer explains her idea with easy method. The language is very straightforward all the people, so do certainly not worry, you can easy to read this. The book was published by famous author. The author gives you in the new age of literary works. You can actually read this book because you can read more your smart phone, or device, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can open their official web-site in addition to order it. Have a nice go through.
