Advances in Carbon Dioxide Compression and Pipeline Transportation Processes (SpringerBriefs in Applied Sciences and Technology) By Andrzej Witkowski, Andrzej Rusin, Miroslaw Majkut, Sebastian Rulik, Katarzyna Stolecka

Providing a comprehensive analysis of CO₂ compression, transportation processes and safety issues for post combustion CO₂ capture applications for a 900 MW pulverized hard coal-fired power plant, this book assesses techniques for boosting the pressure of CO₂ to pipeline pressure values with a minimal amount of energy. Four different types of compressors are examined in detail: a conventional multistage centrifugal compressor, integrally geared centrifugal compressor, supersonic shock wave compressor, and pump machines. The study demonstrates that the total compression power is closely related to the thermodynamic process and is not determined by compressor efficiency alone. Another problem addressed is that of CO₂ pipeline transport from the compressor outlet site to a disposal site under heat transfer conditions. The book also features an analysis of simulations and models that are used to determine the maximum safe pipeline distance to subsequent booster stations as a function of inlet pressure, ambient temperature, thickness of the thermal insulation and ground-level heat flux conditions. This book focuses on compression as well as transportation processes with particular emphasis on the safety risks related to the transport of CO₂. The most important problem in terms of environmental protection is ensuring precise and reliable hazard identification. As hazards can only be managed effectively if they are properly identified, problems involving the discharge and atmospheric dispersion of CO₂ are also discussed.

Editorial Review

From the Back Cover

Providing a comprehensive analysis of CO₂ compression and transportation processes and safety issues for post combustion CO₂ capture applications for a 900 MW pulverized hard coal-fired power plant, this book analyzes techniques to boost the pressure of CO₂ to pipeline pressure values with the minimal amount of required energy. Four different types of compressors are looked at in detail: a conventional multistage centrifugal compressor, and integrally geared centrifugal compressor, a supersonic shock wave compressor, and pump machines. This study emphasizes that the total compression power is a strong function of the thermodynamic process and is not determined by the compressor efficiency only. Another problem analyzed in this work, is the CO₂ pipeline transport from the compressor outlet site to a disposal site under heat transfer conditions. This book also features analysis of simulations and models that are used to determine the maximum safe pipeline distance to subsequent booster stations as a function of the inlet pressure, ambient temperature, thickness of the thermal insulation and ground level heat flux conditions. This book focuses on compression as well as transportation processes with particular stress on the safety risk related to the transport of CO₂. The most important problem in terms of environmental protection is a precise and reliable hazard identification. As hazards can only be managed effectively if they are properly identified problems involving the discharge and atmospheric dispersion of CO₂ are discussed.

About the Author

Andrzej S. WITKOWSKI is Professor of Mechanical Engineering at the Silesian Technical University of Technology in Gliwice, where he received his doctor and habilitated doctor degrees. He has more than 50 years of teaching, research, and consulting experience in compressors and fans, wind turbines, aerodynamics, experimental and fluid dynamics. Most of his research is focused on detailed understanding and modelling of the flow field in turbomachines. The specific areas include the rotor wake steady and unsteady flow field in a single-stage compressor, the rotor-stator interaction, and the rotor stall inception in the axial flow low-speed compressor stage. His experience covers a wide spectrum including experimental work, analytical and computational modelling, and improvement in compressor performance through loss correlations. He developed and equipped the axial flow compressor stage laboratory at the Technical University in Gliwice, which now comprises an axial flow low-speed compressor stage. This makes it possible to measure the unsteady flow field in the rotor blade-to-blade channels with the use of three different anemometer systems. He has been involved lately in the analysis of compression and transportation processes for post-combustion CO₂ capture applications for pulverized coal-fired power plants. He has received numerous awards granted by the Polish Ministry of National Education.

This work is supported by the Polish National Centre of Research and Development in the framework of the Contract: Strategic Research Programme (Advanced Technologies for Energy Generation).

Users Review

From reader reviews:

George Kirby:

Now a day people who Living in the era exactly where everything reachable by connect to the internet and the resources inside it can be true or not demand people to be aware of each info they get. How many people to be smart in acquiring any information nowadays? Of course the solution is reading a book. Studying a book can help folks out of this uncertainty Information particularly this Advances in Carbon Dioxide Compression and Pipeline Transportation Processes (SpringerBriefs in Applied Sciences and Technology) book because this book offers you rich info and knowledge. Of course the details in this book hundred percent guarantees there is no doubt in it as you know.

June Whitaker:

This Advances in Carbon Dioxide Compression and Pipeline Transportation Processes (SpringerBriefs in Applied Sciences and Technology) are generally reliable for you who want to become a successful person, why. The key reason why of this Advances in Carbon Dioxide Compression and Pipeline Transportation Processes (SpringerBriefs in Applied Sciences and Technology) can be among the great books you must have will be giving you more than just simple looking at food but feed an individual with information that might be will shock your preceding knowledge. This book will be handy, you can bring it all over the place and whenever your conditions in e-book and printed kinds. Beside that this Advances in Carbon Dioxide Compression and Pipeline Transportation Processes (SpringerBriefs in Applied Sciences and Technology) giving you an enormous of experience including rich vocabulary, giving you trial run of critical thinking that we know it useful in your day pastime. So , let's have it appreciate reading.

Cathleen Read:

The reserve with title Advances in Carbon Dioxide Compression and Pipeline Transportation Processes (SpringerBriefs in Applied Sciences and Technology) possesses a lot of information that you can find out it. You can get a lot of advantage after read this book. This book exist new information the information that exist in this publication represented the condition of the world now. That is important to yo7u to find out how the improvement of the world. This kind of book will bring you throughout new era of the globalization. You can read the e-book with your smart phone, so you can read the idea anywhere you want.

Christy Fowler:

This Advances in Carbon Dioxide Compression and Pipeline Transportation Processes (SpringerBriefs in Applied Sciences and Technology) is great reserve for you because the content which is full of information for you who also always deal with world and possess to make decision every minute. This kind of book reveal it data accurately using great coordinate word or we can point out no rambling sentences in it. So if you are read this hurriedly you can have whole information in it. Doesn't mean it only provides you with straight forward sentences but difficult core information with wonderful delivering sentences. Having Advances in Carbon Dioxide Compression and Pipeline Transportation Processes (SpringerBriefs in Applied Sciences and Technology) in your hand like having the world in your arm, facts in it is not ridiculous one. We can say that no guide that offer you world within ten or fifteen moment right but this guide already do that. So , this is good reading book. Hi Mr. and Mrs. occupied do you still doubt that?
