**Moonseed (NASA Trilogy)** By Stephen Baxter

### **It Eats Planets. And It's Here.**

It starts when Venus explodes into a brilliant cloud of dust and debris, showering Earth with radiation and bizarre particles that wipe out all the crops and half the life in the oceans, and fry the ozone layer. Days later, a few specks of moon rock kicked up from the last Apollo mission fall upon a lava crag in Scotland. That's all it takes . . .

Suddenly, the ground itself begins melting into pools of dust that grow larger every day. For what has demolished Venus, and now threatens Earth itself, is part machine, part life-form: a nano-virus, dubbed *Moonseed*, that attacks planets.

Four scientists are all that stand between Moonseed and Earth's extinction, four brilliant minds that must race to cut off the virus and save what's left of Earth--a pulse-stopping battle for discovery that will lead them from the Earth's inner core to a daredevil Moon voyage that could save, or damn, us all.

### Editorial Review

#### Amazon.com Review

Stephen Baxter, the much-lauded author of *Voyage* and *Titan*, has been praised as a sci-fi writer who gets the science right. This rigor and research are clearly evident in *Moonseed*, a tale with high-energy physics and space-travel technology in starring roles. It's Baxter's boyish enthusiasm for science--especially space travel--that makes *Moonseed* so involving.

A world-class disaster epic worthy of any Saturday matinee, *Moonseed* opens with the spectacular, explosive death of Venus, an event requiring energy a thousand billion times the world's nuclear arsenal. As the radioactive blast from the late Venus reaches Earth, scientists scramble to attribute a cause, with massless black holes and elementary particles the size of bacteria pointing towards some sort of superstring as the smoking gun. The pace quickens when the substance that may have caused the demise of Venus is accidentally introduced to Earth. This substance, dubbed *moonseed*, acts as a geological lubricant: processes that normally take millions of years occur in mere months with moonseed in the picture. Once Scotland and the state of Washington get gobbled up by this rock-eating, 10th-dimensional nano-lifeform, all hell breaks loose and the search turns towards finding safe refuge for humanity on the Moon. The book's second half is a seat-of-your-pants, what-if exploration of space travel and terraforming.

An over-the-top doomsday yarn by some measures, *Moonseed* keeps your feet on the ground with good science, good characters, and a good story. --Paul Hughes

#### From Kirkus Reviews

Another massive near-future, near-space yarn from the author of *Voyage* (1997). As NASA space jockey Geena Bourne acrimoniously splits from her geologist husband, Henry Meacher, Venus explodes into nova-like brilliance. The explanation, scientists think, involves superstrings: the planet's wreckage produces massless black holes. Geena returns to work, while Henry travels to Edinburgh to investigate a large Moon rock gathered by the last Apollo mission 30 years ago and left untouched since. Silvery ``Moonseed'' dust escapes from the lab, however, and ``infects'' the ancient volcanic rocks underlying the city, converting them into novel crystalline forms using superstring energies. Within days, Edinburgh is engulfed by volcanic eruptions. Moonseed spreads rapidly around the globe, chewing up the planet's crust, and producing more terrestrial turbulence. Henry, who's developing a theory (is Moonseed some sort of hive organism? or alien nanotechnology that converts planets into spaceships?) must get to the Moon to gather crucial evidence. Geena's the best pilot available, though rundown NASA will need lots of Russian hardware and technical help. Henry confirms that the Moon, too, is infected with Moonseed, but something massive is inhibiting its full development. With Earth doomed to meltdown, the Moons clearly the only safe haven for what's left of humanity. But can it be made habitable in time to receive millions of refugees? Baxter revels in the gritty, practical details of space flight and moon-walking; his alien threat is an intriguing and original one, though unconvincingly developed. But the padding (too many minor characters and unnecessary scenes) slows the pace to a crawl. (Movie rights to The Bridge Production Company) -- Copyright ©1998, Kirkus Associates, LP. #### Review

"...science fiction in which the science is right. A sheer pleasure to read!" -- *New Scientist*

"A major new talent!" -- *Arthur C. Clarke*

"A stunning talent!" -- *Locus*

## Users Review

### From reader reviews:

#### **Henrietta Jimerson:**

This Moonseed (NASA Trilogy) book is simply not ordinary book, you have after that it the world is in your hands. The benefit you obtain by reading this book is usually information inside this publication incredible fresh, you will get details which is getting deeper you actually read a lot of information you will get. This particular Moonseed (NASA Trilogy) without we comprehend teach the one who reading through it become critical in considering and analyzing. Don't become worry Moonseed (NASA Trilogy) can bring whenever you are and not make your tote space or bookshelves' turn into full because you can have it within your lovely laptop even mobile phone. This Moonseed (NASA Trilogy) having fine arrangement in word and layout, so you will not feel uninterested in reading.

#### **Theodore Huff:**

Reading a guide tends to be new life style in this particular era globalization. With reading through you can get a lot of information that will give you benefit in your life. With book everyone in this world can easily share their idea. Textbooks can also inspire a lot of people. Lots of author can inspire their own reader with their story or even their experience. Not only the storyline that share in the textbooks. But also they write about advantage about something that you need instance. How to get the good score toefl, or how to teach your young ones, there are many kinds of book that you can get now. The authors nowadays always try to improve their skill in writing, they also doing some study before they write with their book. One of them is this Moonseed (NASA Trilogy).

#### **Jacqueline Ramos:**

As we know that book is important thing to add our understanding for everything. By a publication we can know everything we would like. A book is a pair of written, printed, illustrated or perhaps blank sheet. Every year ended up being exactly added. This publication Moonseed (NASA Trilogy) was filled about science. Spend your free time to add your knowledge about your technology competence. Some people has various feel when they reading the book. If you know how big selling point of a book, you can feel enjoy to read a publication. In the modern era like right now, many ways to get book that you just wanted.

#### **Jacquelynn Laverty:**

Publication is one of source of information. We can add our expertise from it. Not only for students and also native or citizen will need book to know the revise information of year in order to year. As we know those ebooks have many advantages. Beside many of us add our knowledge, may also bring us to around the world. From the book Moonseed (NASA Trilogy) we can consider more advantage. Don't you to definitely be creative people? To get creative person must like to read a book. Only choose the best book that ideal with your aim. Don't end up being doubt to change your life with that book Moonseed (NASA Trilogy). You

can more inviting than now.
