Editorial Review

From the Publisher
The primary goal of the web site is to provide content for DVD lovers. This comes in the form of news stories that talk about current events in the DVD market, new releases, advances in technology, and the like. There is also a newsletter that registered users can choose to get via e-mail. In order to get our news to the widest possible audience, we syndicate our news into a standard XML format RSS feed. This will enable people to quickly and easily see what the latest and greatest is.

In order to develop a sense of community, we create a discussion board where registered users can create and respond to various topics. We also provide a poll where users can vote on different subjects and see the results.

Additionally, we serve advertisements to potentially generate revenue for the site. And finally, we provide a shopping area, where users can add various items, such as DVDs, DVD players, and accessories, to a cart and buy them.

The book's bottom line is to define a good methodology for creating a web site (with functionality that is used on many different kinds of sites, and that you as a programmer may well be working on in the future) by identifying problems, surmising solutions to those problems, and then implementing those solutions using modern development practices.

About the Author
Dilip Thomas hails from the sleepy little town of Cochin, set in God's own country (India). He is committed to the PHP community, and much of his thrill comes from peering into that community from a philosophical perspective. He first got hooked onto open source in his sophomore days in college, and he has been playing the role of a technology evangelist ever since. His interests also lie in the Apache Jakarta project and open standards technologies in general. He was once spotted organizing bungee jumping shows to flustered audiences in his favorite city of Bangalore.
