**Seasonal Adjustment Methods and Real Time Trend-Cycle Estimation (Statistics for Social and Behavioral Sciences)** By Estela Bee Dagum, Silvia Bianconcini

This book explores widely used seasonal adjustment methods and recent developments in real time trend-cycle estimation. It discusses in detail the properties and limitations of X12ARIMA, TRAMO-SEATS and STAMP - the main seasonal adjustment methods used by statistical agencies. Several real-world cases illustrate each method and real data examples can be followed throughout the text. The trend-cycle estimation is presented using nonparametric techniques based on moving averages, linear filters and reproducing kernel Hilbert spaces, taking recent advances into account. The book provides a systematical treatment of results that to date have been scattered throughout the literature.

Seasonal adjustment and real time trend-cycle prediction play an essential part at all levels of activity in modern economies. They are used by governments to counteract cyclical recessions, by central banks to control inflation, by decision makers for better modeling and planning and by hospitals, manufacturers, builders, transportation, and consumers in general to decide on appropriate action.

This book appeals to practitioners in government institutions, finance and business, macroeconomists, and other professionals who use economic data as well as academic researchers in time series analysis, seasonal adjustment methods, filtering and signal extraction. It is also useful for graduate and final-year undergraduate courses in econometrics and time series with a good understanding of linear regression and matrix algebra, as well as ARIMA modelling.

## **Editorial Review**

From the Back Cover

This book explores widely used seasonal adjustment methods and recent developments in real time trend-cycle estimation. It discusses in detail the properties and limitations of X12ARIMA, TRAMO-SEATS and STAMP - the main seasonal adjustment methods used by statistical agencies. Several real-world cases illustrate each method and real data examples can be followed throughout the text. The trend-cycle estimation is presented using nonparametric techniques based on moving averages, linear filters and reproducing kernel Hilbert spaces, taking recent advances into account. The book provides a systematical treatment of results that to date have been scattered throughout the literature.

Seasonal adjustment and real time trend-cycle prediction play an essential part at all levels of activity in modern economies. They are used by governments to counteract cyclical recessions, by central banks to control inflation, by decision makers for better modeling and planning and by hospitals, manufacturers, builders, transportation, and consumers in general to decide on appropriate action.

This book appeals to practitioners in government institutions, finance and business, macroeconomists, and other professionals who use economic data as well as academic researchers in time series analysis, seasonal adjustment methods, filtering and signal extraction. It is also useful for graduate and final-year undergraduate courses in econometrics and time series with a good understanding of linear regression and matrix algebra, as well as ARIMA modelling.

About the Author

**Estela Bee Dagum** is currently a Research Professor of the Department of Statistical Sciences of the University of Bologna, Italy where she was a Full Professor for 10 years until 2007 (appointed by Chiara Fama, an Italian system for appointing internationally recognized scientists of the very highest caliber). From 2007 until December 2009 she was appointed as Alumna of the Business Survey and Methodology Division at Statistics Canada to serve as a consultant on time series issues, particularly on linkage, benchmarking, trend and seasonal adjustment. Previously, Estelle Bee Dagum was Director of the Time Series Research and Analysis Centre of Statistics Canada where she worked for 21 years (1972-1993). In 1980, she developed the X11ARIMA seasonal adjustment method, later modified to X12ARIMA, which is currently used by most of the world's statistical agencies. In 1994, she jointly developed a benchmarking regression method that is currently used by Statistics Canada and other agencies for benchmarking, interpolation, linkage and reconciliation of time series systems. Estelle Bee Dagum has served as a consultant to a large number of governments and private entities, published 19 books on time series analysis related topics, and more than 150 papers in leading scientific and statistical journals.

**Silvia Bianconcini** is an Associate Professor at the Department of Statistical Sciences, University of Bologna, where she received her PhD on Statistical Methodology for the Scientific Research. Her main research interests are time series analysis with an emphasis on signal extraction, longitudinal data analysis based on latent variable models, and statistical inference of generalized linear models.

## **Users Review**

### **From reader reviews:**

#### **Myrtle Anderson:**

This book untitled Seasonal Adjustment Methods and Real Time Trend-Cycle Estimation (Statistics for Social and Behavioral Sciences) to be one of several books which best seller in this year, here is because when you read this reserve you can get a lot of benefit onto it. You will easily to buy this book in the book shop or you can order it via online. The publisher with this book sells the e-book too. It makes you quickly to read this book, because you can read this book in your Touch screen phone. So there is no reason to you to past this reserve from your list.

#### **Larry Dolin:**

Spent a free the perfect time to be fun activity to try and do! A lot of people spent their spare time with their family, or their very own friends. Usually they accomplishing activity like watching television, gonna beach, or picnic inside park. They actually doing same thing every week. Do you feel it? Would you like to something different to fill your personal free time/ holiday? Could possibly be reading a book is usually option to fill your totally free time/ holiday. The first thing you will ask may be what kinds of e-book that you should read. If you want to test look for book, may be the publication untitled Seasonal Adjustment Methods and Real Time Trend-Cycle Estimation (Statistics for Social and Behavioral Sciences) can be good book to read. May be it could be best activity to you.

#### **Kevin Vickers:**

Seasonal Adjustment Methods and Real Time Trend-Cycle Estimation (Statistics for Social and Behavioral Sciences) can be one of your nice books that are good idea. Most of us recommend that straight away because this guide has good vocabulary that may increase your knowledge in language, easy to understand, bit entertaining but nonetheless delivering the information. The copy writer giving his/her effort to set every word into joy arrangement in writing Seasonal Adjustment Methods and Real Time Trend-Cycle Estimation (Statistics for Social and Behavioral Sciences) but doesn't forget the main point, giving the reader the hottest and based confirm resource info that maybe you can be one among it. This great information may drawn you into brand-new stage of crucial imagining.

#### **Larry Huff:**

That book can make you to feel relax. This book Seasonal Adjustment Methods and Real Time Trend-Cycle Estimation (Statistics for Social and Behavioral Sciences) was colourful and of course has pictures around. As we know that book Seasonal Adjustment Methods and Real Time Trend-Cycle Estimation (Statistics for Social and Behavioral Sciences) has many kinds or category. Start from kids until young adults. For example Naruto or Private eye Conan you can read and believe you are the character on there. So , not at all of book usually are make you bored, any it offers you feel happy, fun and rest. Try to choose the best book for you personally and try to like reading which.
