NMR Spectroscopy: Basic Principles, Concepts and Applications in Chemistry By Harald Günther

Nuclear magnetic resonance (NMR) spectroscopy is one of the most powerful and widely used techniques in chemical research for investigating structures and dynamics of molecules. Advanced methods can even be utilized for structure determinations of biopolymers, for example proteins or nucleic acids. NMR is also used in medicine for magnetic resonance imaging (MRI). The method is based on spectral lines of different atomic nuclei that are excited when a strong magnetic field and a radiofrequency transmitter are applied. The method is very sensitive to the features of molecular structure because also the neighboring atoms influence the signals from individual nuclei and this is important for determining the 3D-structure of molecules.

This new edition of the popular classic has a clear style and a highly practical, mostly non-mathematical approach. Many examples are taken from organic and organometallic chemistry, making this book an invaluable guide to undergraduate and graduate students of organic chemistry, biochemistry, spectroscopy or physical chemistry, and to researchers using this well-established and extremely important technique. Problems and solutions are included.

Editorial Review

Review

“Few good textbooks on NMR Spectroscopy are available at either the undergraduate or graduate levels. For those who want to go beyond elementary organic chemistry but without delving into all the mathematics Friebolin’s book is probably the best among this category.” (*Journal of Chemical Education*, 5 June 2014)

About the Author

Harald Günther studied Chemistry at the Universities of Stuttgart and Heidelberg, Germany, followed by a Postdoctoral Fellowship at Mellon Institute, Pittsburgh, USA. He then became an assistant at the Institute of Organic Chemistry at the University of Cologne, Germany, where he also completed his habilitation. He became Professor of Organic Chemistry at the University of Cologne in 1970, and at the University of Siegen, Germany, in 1978.

Users Review

From reader reviews:

Steven Page:

As people who live in the actual modest era should be up-date about what going on or details even knowledge to make these people keep up with the era that is certainly always change and move forward. Some of you maybe may update themselves by reading through books. It is a good choice for you personally but the problems coming to an individual is you don't know what one you should start with. This NMR Spectroscopy: Basic Principles, Concepts and Applications in Chemistry is our recommendation to help you keep up with the world. Why, because this book serves what you want and need in this era.

Cameron Keller:

Reading a book tends to be new life style within this era globalization. With reading through you can get a lot of information that may give you benefit in your life. Using book everyone in this world can certainly share their idea. Books can also inspire a lot of people. Plenty of author can inspire their particular reader with their story or their experience. Not only situation that share in the publications. But also they write about the information about something that you need case in point. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors on earth always try to improve their skill in writing, they also doing some exploration before they write on their book. One of them is this NMR Spectroscopy: Basic Principles, Concepts and Applications in Chemistry.

Laverne Jackson:

Playing with family within a park, coming to see the sea world or hanging out with good friends is thing that usually you could have done when you have spare time, in that case why you don't try thing that really opposite from that. 1 activity that make you not sensation tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of information. Even you love NMR Spectroscopy: Basic Principles, Concepts and Applications in Chemistry, you may enjoy both. It is fine combination right, you still want to miss it? What kind of hangout type is it? Oh come on its mind hangout people. What? Still don't understand it, oh come on its referred to as reading friends.

Ann Lang:

Do you have something that that suits you such as book? The e-book lovers usually prefer to pick book like comic, brief story and the biggest an example may be novel. Now, why not attempting NMR Spectroscopy: Basic Principles, Concepts and Applications in Chemistry that give your pleasure preference will be satisfied by simply reading this book. Reading habit all over the world can be said as the opportunity for people to know world better then how they react in the direction of the world. It can't be mentioned constantly that reading behavior only for the geeky man or woman but for all of you who wants to end up being success person. So , for every you who want to start reading through as your good habit, you may pick NMR Spectroscopy: Basic Principles, Concepts and Applications in Chemistry become your personal starter.
